

FIG. 1 is a block diagram of a system for migrating data from an originating system to a target system. The system includes an originating system/server (10) and an administrator module (11). The originating system/server (10) includes an originating system database (21) and a temporary database files (25). The administrator module (11) includes a migrator object (22) and a requestor object (11A). The migrator object (22) is connected to the originating system database (21) and the temporary database files (25). The requestor object (11A) is connected to the temporary database files (25). The system also includes a tape library (13) and a network share (12).
